

Skipzy — Customer Journey & Growth Hypotheses

Context

Based on my recent ground-level sales experience and weekend analysis, I noticed a few patterns in the customer journey. These are **hypotheses, not conclusions**, and I think they may be worth testing with small experiments and data.

1. Interest → Appointment drop-off

Several parents showed interest and said they would check Skipzy later, but didn't necessarily book. Some people opened the website but didn't proceed because the first step asks for their phone number.

Hypothesis: We may be asking for a relatively high-commitment action before the customer has understood Skipzy.

Instead, the customer could first:

- Understand how Skipzy works
- Explore categories/occasions
- See the home-trial experience
- Understand the value
- See customer experiences and reviews

Then ask for the phone number and appointment.

Metric: Visitor → engaged visitor → appointment conversion.

2. Website feels more like a booking flow than a fashion experience

The current website mainly moves the customer toward appointment booking.

For fashion, customers may want:

Discover → Explore → Compare → Imagine → Try → Decide

rather than simply:

Search → Select → Order

Hypothesis: The "shopping for kids as easy as ordering food" analogy may need some tuning. Convenience is important, but discovery and visual experience may also be important.

An exploration-first website could include:

- Product/outfit visuals
- Occasion-based shopping
- Age/size-based discovery
- Style preferences
- Curated selections

- How Skipzy works
- Customer experiences

Then compare conversion with the current booking-first flow.

3. Customer engagement after interaction and booking

After the ground interaction, the customer may become disconnected from Skipzy and receive mainly cold follow-up messages/calls.

Hypothesis: We generate the lead, but don't maintain enough digital engagement before and after the appointment.

Possible experiment:

After an interested customer interacts with us, send a personalized Skipzy link where they can explore:

How it works → Clothes → Reviews → FAQs → Personalized experience → Appointment

After booking, send SMS/WhatsApp confirmation with:

- Appointment ID
- Date/time
- Location
- Contact
- Tracking link

A "**Track My Appointment**" page could show:

Confirmed → Scheduled → Upcoming → Completed

and include reminders, rescheduling, FAQs, location and relevant Skipzy content.

This could make the website a **customer-engagement layer rather than only a booking tool**.

4. "Food delivery analogy for kids' clothes" may need some tuning

The convenience aspect is strong, but fashion involves:

- Visual discovery
- Personal taste
- Fit
- Style
- Occasion
- Comparison
- Trying before deciding

So perhaps the stronger proposition is:

Convenience + Discovery + Curation + Home Trial

rather than convenience alone.

This is something we can test rather than assume.

Overall hypothesis

My hypothesis is that **the customer journey may need tuning:**

**Offline interaction → Digital engagement → Discovery → Booking → Appointment tracking →
Home trial → Purchase**

rather than:

Offline interaction → Cold follow-up → Booking → Purchase

These are only hypotheses from my limited ground-level observations and knowledge, but I think small experiments could help us identify where the biggest opportunity is.
